About

A Full Stack Developer and DevOps with a strong background in building and maintaining web applications. My experience spans across frontend development with Angular2+ and React, and backend services using Java frameworks like Micronaut and Spring MVC. I have successfully managed projects from concept to deployment, particularly focusing on scalable solutions and modernizing tech stacks. Additionally, I have freelance experience as a DevOps engineer, where I orchestrated the migration of legacy systems to robust AWS environments with automated deployments. I am passionate about continuous learning, mentoring junior developers, and contributing on GitHub or StackOverflow. Fluent in English, Portuguese, and a native French speaker, I thrive in collaborative environments and am committed to leveraging my skills to drive innovation and deliver impactful solutions.

Work Experience

Agorapulse

Full Stack Developer Oct 2021 - Present <https://agorapulse.com>

Social media web and mobile app, i've first been working on self-service subscription management where we migrated the payment's provider and updated the UI and pricing model of the SaaS. Then, I've been working on the mobile app, implementing new features and fixing bugs. I'm now in charge of the releases of the mobile app.

- Feature implementation
- Agile scale-up challenges

Easley fin.

Freelance DevOps Aug 2020 - Nov 2020 <https://github.com/hgosards-stack>

Migrated from a single docker container managed manually on legacy hosting to aws cloudformation's infra as code on multiple replicated environments with continuous deployment.

- Full AWS Solution delivered
- Team training
- Deployment automation, CD

Wezen

Full Stack Developer Jan 2018 - Sep 2021 <https://wezen.com>

From a team of 3 to a full team of 20, i've been in charge of first migrating from angular, to NG2+. Then, I've been leading the frontend evolutions for the translation management interface and workflows. i've also setup a continuous integration solution with jenkins to help the team.

- Lead feature teams
- Successful product evolutions
- Continuous integration solutions
